

THE RIO SERIES

Vent Free Gas Log Heaters

Calico

Superior design, performance and features together with true, wood-burning realism hallmark the most innovative, most advanced hearth products ever available. Only from Design Dynamics.

Innovation on fire

It isn't often that a product line offers looks, features, performance and quality at a level to lead an entire industry in virtually every category. The Rio Series™ from Design Dynamics™ presents this rare opportunity with the beautiful new Calico Vent Free Gas Log Heater.

Dramatic Realism

The Calico's intricately detailed log stack and glowing ember bed are painstakingly recreated from an actual wood fire complete with logs, coals and embers. Then they're hand finished in natural wood tones throughout the deep bark patterns, split wood highlights, and even the smoked, charred features of an active fire. The Calico features a dual burner design that recreates a deep, glowing and mature ember bed, but also with plenty of yellow flame. The control and gas train assembly is completely hidden from view to maximize the realistic scene.

Outstanding Performance

A glowing presentation like this in a vent free heater can only be achieved through superior design and nearly perfect fuel combustion. The Calico's high efficiency, dual burner design maximizes the glowing and heating properties of the ceramic log material, and achieves the cleanest, most complete burn in the Industry!

Absolute Safety

You can rest assured that your new Calico is also the safest vent free gas log heater available. In addition to vent free safety controls and industry-leading, clean flame combustion technology, the entire log set is unitized in a carefully pre-assembled arrangement. This feature assures maximum performance and eliminates the possibility of log misplacement or movement, which could affect indoor air quality. The control and gas train are 100% factory assembled and tested.

Instant Enjoyment & Convenience

The Calico's unitized design also makes installation a breeze. Just complete the gas connection using the shut-off valve and stainless flex connector provided. And Design Dynamics' logs don't require any break in or "burn off" period, so you can enjoy your new heater instantly, and with the convenience of remote electronic ignition and operation from the hand-held control.

Standard Features:

- Realistic ceramic fiber log set and ember bed is unitized to assure safety, performance, and ease of installation.
- Dual flame, high efficiency burner system for realistic look and feel, creates active, colorful flame presentation and plenty of glowing coals.
- Electronic Ignition and Operation.
- Hand-held, multi function radio frequency remote control
- Decorative control cover, log scraps, and lava floor cinders complete the custom hearth presentation.
- 99% heating efficiency.
- Fully assembled gas train assembly; concealed to maximize realism.

Solid, unitized log set is intricately detailed.

Gas train/ control assembly is fully assembled and factory tested.

Standard feature components include hand-held, multi-function remote control

Log Size	Minimum Firebox Size			
	Height	Depth	Front Width	Rear Width
